**Team:** Mithul Raaj A T, Sanya Katiyar, Julian Sanders, Ryan Richards

***BE BOUNDLESS***

# Background

- Options are contracts that allow traders buy or sell a *stock* at a set *strike* price before an *expiration date* by paying a premium
- Divided into *Calls* (*bullish*) and *Puts* (*bearish*)

# W

# Background

- Options are contracts that allow traders buy or sell a *stock* at a set *strike* price before an *expiration date* by paying a premium
- "I think the price of NVDA will rise to \$150 by September 1 2025"*
  - Buy a 150 *Call* option expiring on 09/01/25

# W

# Background

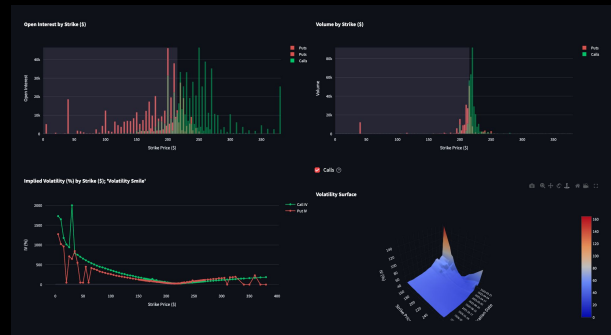

- Options **chains** are tables contain various pieces of information for all contracts across all strikes and expiration dates:
  - Trading prices (premiums)
  - Quotes (current bids and asks)
  - Open Interest (number of contracts available to trade)
  - Volume
  - and many more!

# Background

- Chains are difficult to interpret and understand trends
- Opportunity to use modern visualization and LLM tools to gain better insight
- We created a webapp called *OptionsViz* that ingests options chain data to:
  - create meaningful visualizations
  - assess the risk-reward tradeoff for strategies
  - query LLMs to identify market trends and sentiment from news articles

# W

# Data

---

- **Yahoo Finance:** End-of-Day (EOD) options chains

## TV TradingView

- **TradingView:** Real-time and historical price data

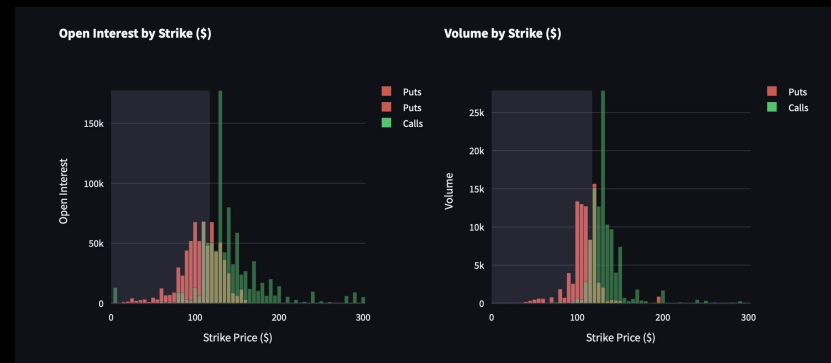

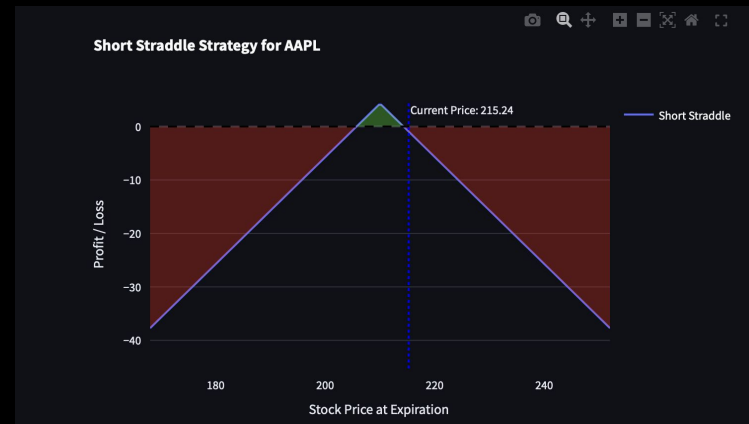

News API

- **NewsAPI:** real-time news feed for LLMs

# W

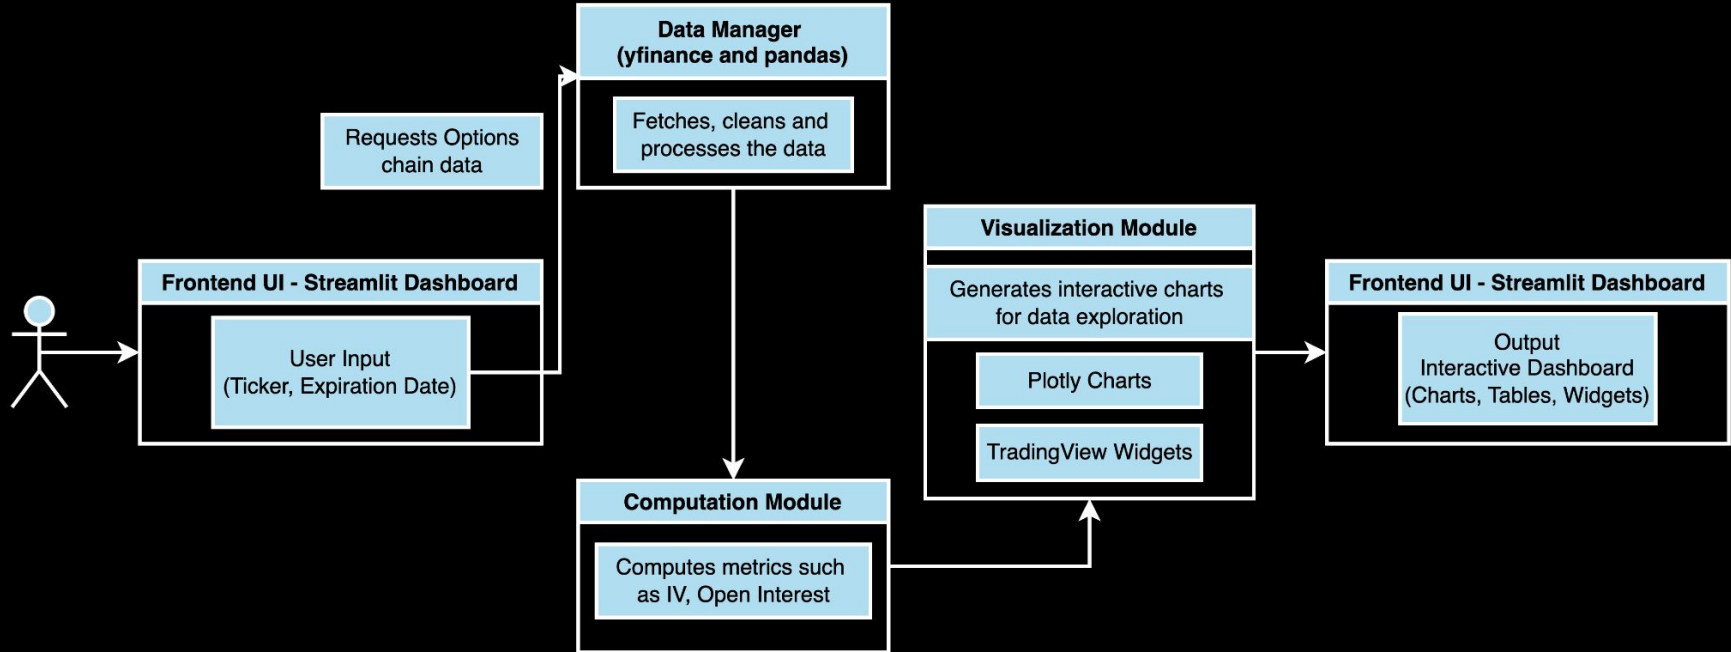

# Use cases

- Retail trader
- Risk-reward assessment
  - visualize options strategies and current market trends

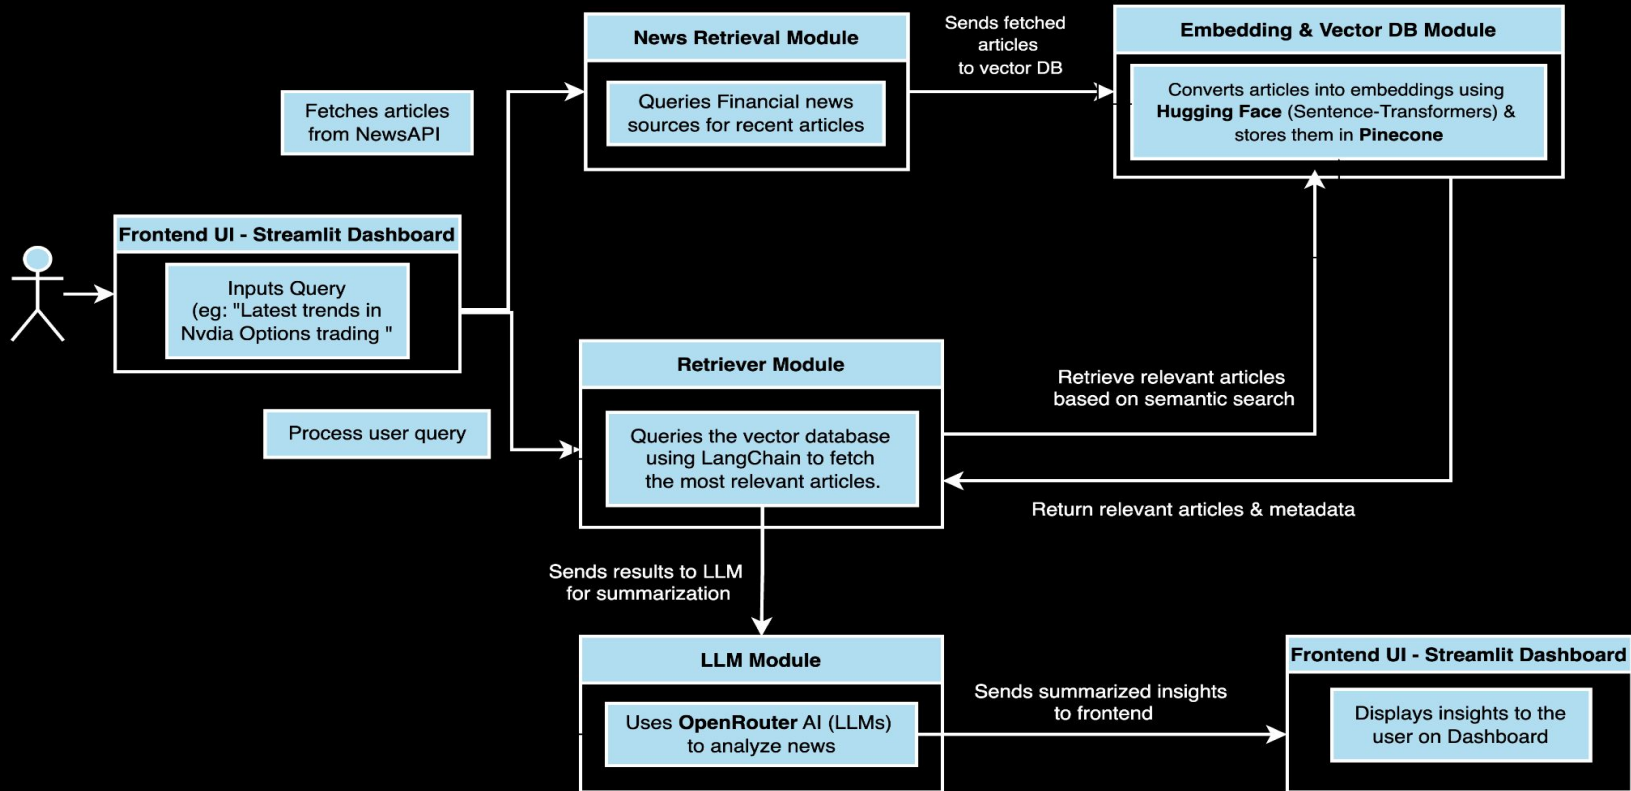

# W

# Design

# Lessons learned and future work

---

## Lessons:

- Streamlit functionality
- CI/CD testing through GitHub

## Future:

- Integrate historical data for more robust analysis
